1 Venn Diagram

Note 13

Out of 1,000 computer science students, 400 belong to a club (and may work part time), 500 work part time (and may belong to a club), and 50 belong to a club and work part time.

- (a) Suppose we choose a student uniformly at random. Let *C* be the event that the student belongs to a club and *P* the event that the student works part time. Draw a picture of the sample space Ω and the events *C* and *P*.
- (b) What is the probability that the student belongs to a club?
- (c) What is the probability that the student works part time?
- (d) What is the probability that the student belongs to a club AND works part time?
- (e) What is the probability that the student belongs to a club OR works part time?

2 Flippin' Coins

- Note 13 Suppose we have an unbiased coin, with outcomes H and T, with probability of heads $\mathbb{P}[H] = 1/2$ and probability of tails also $\mathbb{P}[T] = 1/2$. Suppose we perform an experiment in which we toss the coin 3 times. An outcome of this experiment is (X_1, X_2, X_3) , where $X_i \in \{H, T\}$.
 - (a) What is the *sample space* for our experiment?
 - (b) Which of the following are examples of *events*? Select all that apply.
 - $\{(H,H,T),(H,H),(T)\}$
 - $\{(T,H,H), (H,T,H), (H,H,T), (H,H,H)\}$
 - $\{(T, T, T)\}$
 - $\{(T,T,T), (H,H,H)\}$
 - $\{(T,H,T),(H,H,T)\}$
 - (c) What is the complement of the event $\{(H,H,H), (H,H,T), (H,T,H), (H,T,T), (T,T,T)\}$?
 - (d) Let *A* be the event that our outcome has 0 heads. Let *B* be the event that our outcome has exactly 2 heads. What is $A \cup B$?
 - (e) What is the probability of the outcome (H, H, T)?
 - (f) What is the probability of the event that our outcome has exactly two heads?
 - (g) What is the probability of the event that our outcome has at least one head?

3 Sampling

- Note 13 Suppose you have balls numbered 1, ..., n, where *n* is a positive integer ≥ 2 , inside a coffee mug. You pick a ball uniformly at random, look at the number on the ball, replace the ball back into the coffee mug, and pick another ball uniformly at random.
 - (a) What is the probability that the first ball is 1 and the second ball is 2?
 - (b) What is the probability that the second ball's number is strictly less than the first ball's number?
 - (c) What is the probability that the second ball's number is exactly one greater than the first ball's number?
 - (d) Now, assume that after you looked at the first ball, you did *not* replace the ball in the coffee mug (instead, you threw the ball away), and then you drew a second ball as before. Now, what are the answers to the previous parts?
